

Veterans of Power

Providing custom solutions for high end power requirements in military and commercial markets, AJPS designs systems based solely on existing designs and power platforms to insure high reliability and short development time. Operations are monitored and controlled by ISO 9001:2000 based quality system. AJPS designers have over 100 years of combined power supply experience and we are a veteran supplier of ground and airborne avionics power systems to prime contractors of the US Department of Defense, other US government agencies, and its allies.

AJ's Power Source supplies high end custom power solutions to:

US Navy Air Force Army Marines Coast Guard

HMMWV

The KSAT01C Power System was developed to meet MIL-STD-1275B in Military Vehicles. These units were designed as a joint venture between [AJ's Power Source Inc.](#) and Titan Corp.

F-16 Fighting Falcon

The 919810 Power Supply / Filter Module was developed for the F-16 in 2006. Designed as a joint venture between [AJ's Power Source Inc.](#) and L-3 Communications, they power an extremely sensitive five segment interferometer antenna mounted on the outside of the F-16. The custom design was based on the extreme environments the F-16 is subjected to.

UH-60 Blackhawk

The SAN01C Power System was developed in 1997 for the UH-60 Blackhawk Helicopter. These units were designed as a joint venture between [AJ's Power Source Inc.](#) and Sanmina/SCI.

RIM-7 Sea Sparrow

The NORD04P, NORD06P, NORD11P, and NORD12P Power Systems were developed in 1992 for the RIM-7 Sea Sparrow missile guidance system. These units were designed as a joint venture between [AJ's Power Source Inc.](#) Northrop Grumman and Raytheon.
